Note:

- This open source kit is sold without an enclosure. All pictures showing enclosures are for demonstration purposes only !
- The TRMNL 7.5" (OG) DIY Kit requires a TRMNL BYOD license (\$50) to access over 300+ ready-to-deploy plugins for building your TRMNL dashboard. [Purchase your BYOD license here.](#)

**Compatible with TRMNL (TRMNL Access Required)**

This kit is specifically designed as the official TRMNL BYOD kit to build the TRMNL 7.5" OG device from scratch. With the TRMNL BYOD Access, you can boast [over 375 ready-to-deploy plugins](#) and choose from 8 layouts to build the perfect dashboards for your daily and even commercial applications without coding. For example, Calendar, Shopify and Github plugins and so on. It offers a no-code experience, making it super easy for even beginners to get started.

### 7.5" e-Ink Display for Your Custom Dashboard

This kit features a 7.5" monochrome (black and white) e-Ink display with 800×480 resolution, capable of presenting comprehensive information simultaneously. From sensor data to weather forecasts and full-page calendars, all the information that you need is available at a glance. Moreover, the glare-free e-Ink display ensures clear readability in any lighting condition while reducing eye strain.

### **Energy-Efficient Design with Low-Power Consumption**

Powered by a 3.7V 2000mAh rechargeable Li-ion battery, it operates for up to 3 months on a single charge in deep sleep mode (6-hour refresh interval).

### **Home Assistant and Arduino IDE Compatibility for Your Applications**

This kit comes with a XIAO ESP32-S3 Plus based XIAO ePaper Display Dev Board, which is compatible with ESPHome for native Home Assistant integration, making it a perfect e-ink screen for your Home Assistant Lovelace dashboard to visualize home automations. Moreover, as an open-source kit with full Arduino IDE compatibility, developers can create custom dashboards using Arduino C programming.

### **Open Source Enclosures for Your Re-Mix**

This kit doesn't include the enclosure, but we provide three beautiful enclosure designs, available open-source on [Printables](#), [Thingiverse](#), and [Maker World](#). Both combine aesthetics and functionality to enhance your project's appeal.

## Specification

Parameter	Description
MCU	XIAO ePaper Display Dev Board with XIAO ESP32-S3 Plus onboard
Display	<a href="#">7.5-inch Monocolor ePaper Display</a>
Resolution	800x480
Operating Voltage	3.3V to 5V
Battery	2000mAh Rechargeable Li-ion Battery (3-months battery life in deep sleep mode on a single charge)
Operating Temperature	-40°C to 85°C
Enclosure	<b>Not included.</b> But they are open sourced on Printables and Thingiverse for your custom remix.
